ABSTRACTED-PUB-NO: TW 546854A

BASIC-ABSTRACT:

NOVELTY - This invention discloses the usage of red phosphor glue which has broader wavelength spectrum coverage to replace red chip which has narrower wavelength spectrum coverage, then combining green chip and blue chip to emit more realistic colorless light. This invention also discloses the usage of green phosphor glue which has broader wavelength spectrum coverage to replace green chip which has narrower wavelength spectrum coverage, then combining red chip and blue chip to emit more realistic colorless light. This invention

further discloses the usage of red phosphor glue which has broader wavelength spectrum coverage and green phosphor glue which has broader wavelength spectrum coverage to replace red chip and green chip respectively, then combining blue chip to emit more realistic colorless light. The glue used in this invention to spray over the chip(s) also provides protection to the chip(s).
